

# Egress Wells

## Beauty

Whichever Wellcraft egress system you choose, you will be truly satisfied with the quality and beauty that these windows and wells provide. Your basement will be filled with natural light and our available well colors will blend with your interior décor.

## It's the Law

According to the 2006 IRC–International Residential Code requirements, egress windows and wells are required under the following circumstances:

- If you add a bedroom a basement, an egress window must be installed in that bedroom.
- If you create a habitable space in your basement and you currently do not have an egress window, one must be included with the installation of the habitable room.

## Dependable

You can count on a closed well cover to be sturdy enough to support up to 500 pounds while eliminating the risk of anyone falling in the well. The cover is also light enough for a child to escape easily.

## Maintenance-Free

Wellcraft egress window wells are made from polyethylene with UV inhibitors. This durable material gives them superior weathering capabilities and no maintenance once they have been installed. They are warranted against rusting, rotting and decay for a period of ten years.

## Safety

Fire can spread rapidly through a home, leaving as little as two minutes to escape safely. In the event of a fire or emergency, family members have the ability to escape out of the basement quickly through Wellcraft egress windows and wells.

## Model #5600

### Installs in a snap.

The 5600 offers many custom possibilities. You're not limited to a set height—make your well as short or as high as you need. A typical installation uses four sections and is made easy with simple, snap-together construction. The 5600 is designed for windows up to 4-foot wide. Each section weighs only 24 pounds and is easy to transport.
