

Water Trek Aqua Route[®]

Basement Technologies
The Basement Specialists™
Basement Waterproofing

The Water Trek Aqua Route[®] Basement Waterproofing System is Patented for a Reason ... IT JUST WORKS BETTER!

The **Water Trek Aqua Route[®]** system is patented and can be "custom tailored" to each basement water problem encountered. It addresses water from both sides of the footing, floor and walls. Trust your home to the leading name in basement waterproofing! - **Basement Technologies!**

Water Trek Aqua Route[®] and the Cove Base

Basement Technologies routinely installs waterproofing systems in finished and unfinished basements throughout North America. With Basement Technologies' "custom tailored" patented system solutions comes total peace of mind!

Improving Basement Waterproofing From The Ground Up™

Water Trek Aqua Route®

Your "peace of mind" **Water Trek Aqua Route®** system will be designed and engineered by a Basement Technologies' System Technician and installed by a fully trained Basement Technologies' Installation Team. Basement Technologies has and continues to install our patented **Water Trek Aqua Route®** system in thousands of homes throughout North America.

Independent and company research testing prove that basement water originates from in front of the footing, as well as, from the footing foundation wall seam. The **Water Trek Aqua Route®** conduit has slots on both sides to accommodate both problem areas. The patented system is self-washing and virtually "clog free".

Soil composition, along with footing, wall and floor construction vary greatly from one house to another. It is virtually impossible to analyze any soil and footing configuration until the floor is opened.

Identifying the footing configuration in relation to the floor (slab) and the foundation wall is the key to installing a waterproofing system that will last for the life of your home. Our fully trained Basement Technologies' Design Technicians and Installers play a critical role in guaranteeing that your basement stays dry forever.

Your home is your most valuable asset... and each home and basement is different. The **Water Trek Aqua Route®** system is engineered with two (2) unique patented components. This design enables your Basement Technologies' representative to address and solve any sub-floor problem with a "custom tailored" cost effective basement waterproofing solution.

The **Water Trek Aqua Route®** system is uniquely adaptable and can accommodate all four (4) possible footing configurations. Our exclusive, versatile, "no-clog" self-washing, adjustable depth system delivers a "peace of mind" permanent solution to your basement water problem.

Please ask your Basement Technologies representative for more details on our patented **Water Trek Aqua Route®** system and other great waterproofing products.

Patented for a reason:
it just works better!

Self - Cleaning

Addresses water in front and in back of footing.

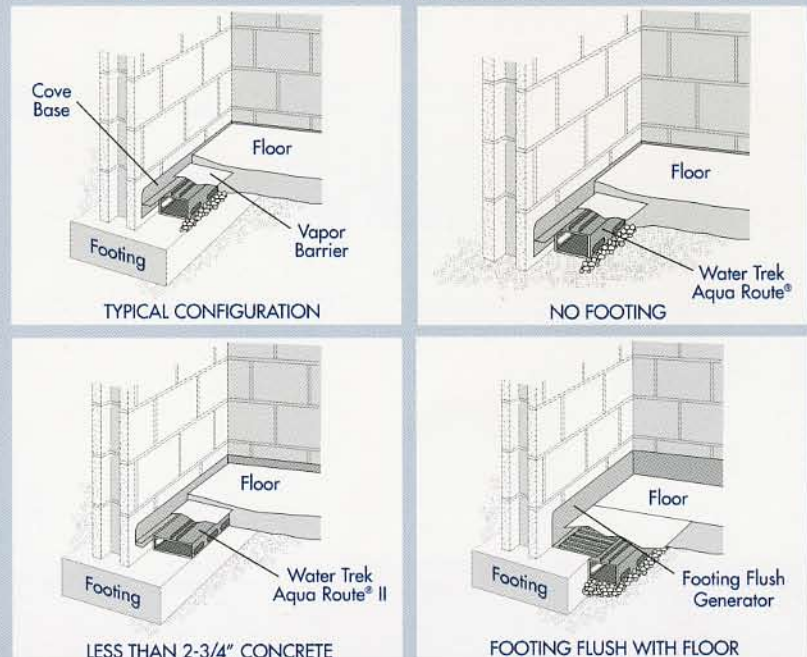

Floor grate at bulkhead door.

The **Water Trek Aqua Route®** is a self-cleaning conduit with holes in the front and back which allow the conduit to continuously clean itself guaranteeing a non-clogging sub-floor system.

You need a "Permanent Solution" system to adapt to your sub-floor needs.

Examples of possible basement configurations and how the **Water Trek Aqua Route®** can be custom tailored to adapt to your subfloor needs, dependent on slab, footing or soil conditions.

“Where design innovation *keys* our superior products™”

Finished Water Trek Aqua Route® with Cove Base

Handles any footing & wall configuration

Cove Base

The Water Grabber® Bull Dog™, the patent pending sump that does not look like a sump.

Cove Base Profiles

Basement Technologies' Cove Base is an integral part of the **Water Trek Aqua Route**® two-piece system. The various Cove Base designs hug walls and channels water from the wall above to the sub-floor **Water Trek Aqua Route**® system below.

It can create a virtual airtight fit on most, if not all, foundations thus eliminating potential radon gas, sub-floor smells or insects from entering the living space. We have 5 different Cove Base options, each designed to fit and be custom tailored to your basement.

These Cove Base designs can be applied to any footing configuration and are easily adaptable to all sub-floor conditions. The slots on the bottom allow water from the footing to pass to the **Water Trek Aqua Route**® system.

After installing a full perimeter **Water Trek Aqua Route**® system, you can rest assured that your basement will be dry forever - it's warranted!

Please ask your Basement Technologies representative for more details on the various Cove Base designs available and for other great waterproofing products.
